

# Time to Act!

Unscheduled downtimes are not affordable, especially in the forging business. With the current high challenges, it is extremely important to use all potentials of cost reduction. Invest in your future and automate your production lines! The new electronic Forging Transfer from PHS helps you to increase the up-time of your production line!

With our Forging Transfer, you benefit from our experience of over 30 years in forging applications. Our full range retrofit offer reduces the number of interfaces and simplifies your forging line!

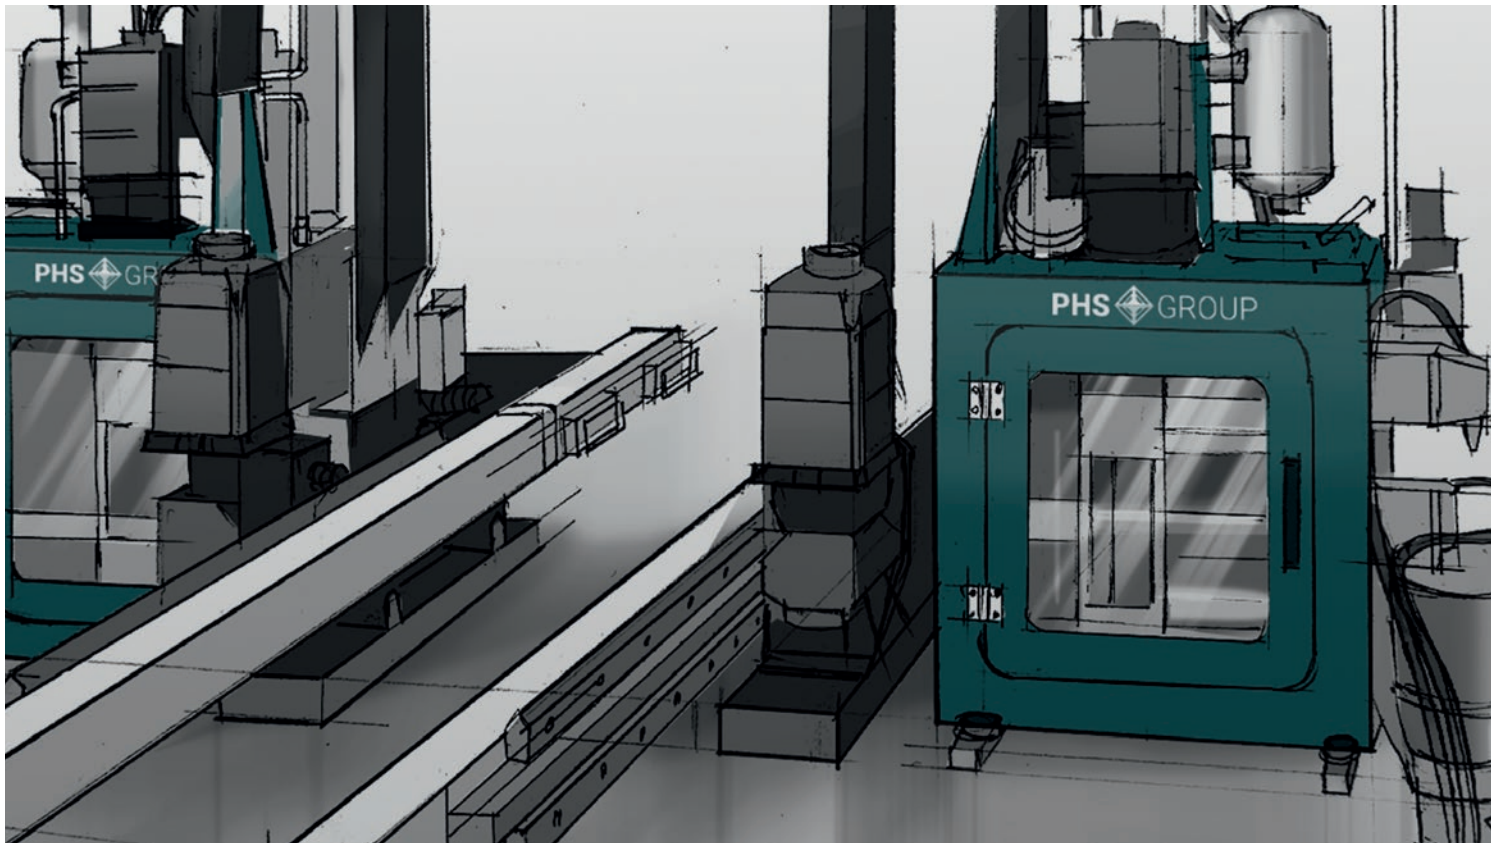

## The Facts:

Specification		BG1 <a href="#">hf/cf</a>	BG2 <a href="#">hf/cf</a>
Feed travel	mm	0-350	0-500
Grip travel	mm	0-150	0-250
Lift travel	mm	0-250	0- <a href="#">250</a> / <a href="#">750</a>
Stroke rate*	1/min	50	40

\* The specified values are depending on travels, angle positions and moved weights!

The Forging Transfer is a durable and a maintenance-friendly product, based on more than 30 years experience in the development, maintenance and servicing of transfers. It is designed to face your current and future challenges.

The forging transfer increases the the up-time and productivity of your production line and makes you more competitive in the future. With the quick ROI you have a safe investment and your production gets on the next level.
